Components:		
Rails:	1/2" x 1" x 24"	(x2)
Back:	1/2" x 3-1/8" x 24"	(x1)
Sides:	1-1/2" x 2-5/8" x 4"	(x2)
Screws:	#8 x 1-1/4"	(x9)
	#9 x 3"	(x4)
	#8 x 2" (Pocket)	(x4)

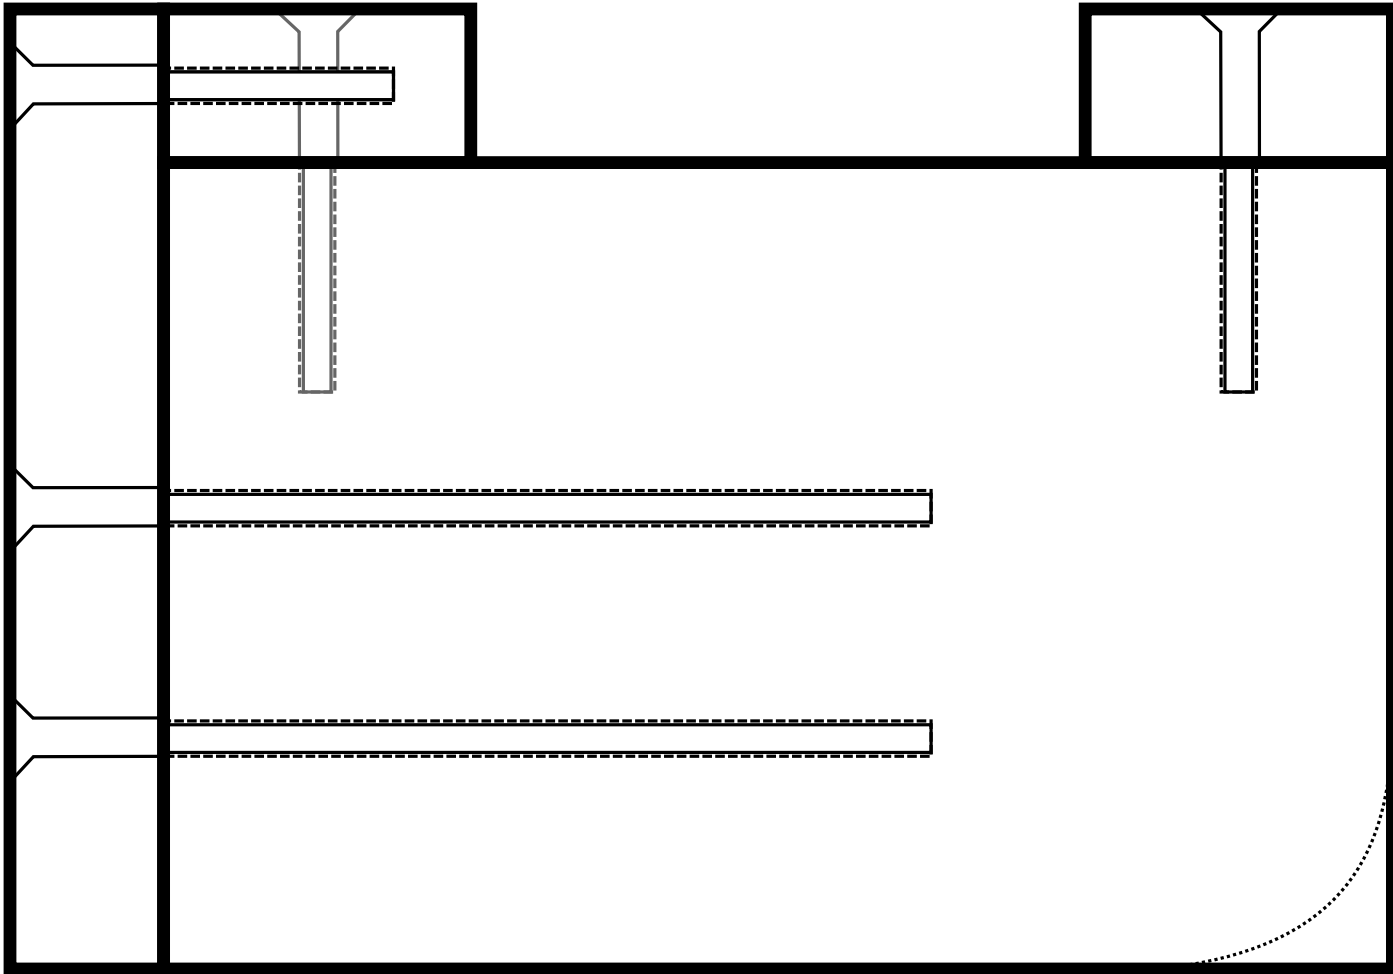

Notes:

Millimeters are noted on the measured drawings. They are also approximate as they were converted from inches. All measurements can be rounded up or down as you see fit. The only crucial measurement is the distance between the mounting holes. These are set to 16" to match the distance between wall studs found in America. Change this to match your wall studs, if needed. Additionally, the distance between the rails should fit most common mallets and hammers. This distance can be adjusted to fit your tools.

Brass screws can be used as a decorative element to attach the rails to the sides. The screws that are secured from the rear of the piece can be any type of screw. If you want to save a few dollars, brass screws do not need to be used on the rails. Any type of screw will work here as well. I decided to use pocket hole screws to mount the piece to the wall. If you have metal studs, you will likely need to choose a different screw.
